## Honeywell

## S0 pulse counter with Modbus interface EEM-CONVERTER <br> =

The S0-Modbus coupler module is a device for the collection of S 0 pulses. With this module the consumption data of any measurement device with a S0 output becomes bus capable and can be accessed by a master of Modbus.

## Main features

- Up to 99 S0-Modbus Modules on the same bus
- 4 S0 pulse inputs (S01+... S04+) per S0-Modbus Module
- Up to 396 S0 devices on the same Modbus
- The inputs comply with the S0 standard 62053-31
- Integrated RS-485 termination resistor
- LED for bus activity indication

Order number
EEM-CONVERT

## Dimensioned drawings

Display elements / settings

## S0 inputs

■ Comply with S0 standard 62053-31
■ Counts pulses as ' 0 ' when $\mathrm{R}<800 \Omega$
■ Counts pulses as ' 1 ' when $R>1 \mathrm{M} \Omega$
■ Voltage max. (GND-S0) 13 VDC
■ Current max. ( with $0 \Omega$ ) 6 mA
■ Pulses low
■ Pulses high min .30 ms

■ Frequency min. 30 ms max. 17 Hz

## Changing the Modbus-Address

■ The Modbus address can be set with the rotary switches.
■ The address is set max. 10 s as soon as the rotary switches no longer were rotated.

Note: Modbus don't allow a device address '0'. Nevertheless if it is set, the EEM-CONVERT module isn't communicating via the bus and the the two LEDs are flashing each with 1 Hz , however the S 0 pulses are counted

## Wirings Diagram

Note: If the $\mathbf{S 0}$-Modbus module is used in the Modbus as last device, then the sliding switch «RS-485 Terminate» need to be in the position «On».

## Technical data Modbus

| Protocol | Modbus RTU according to IDA specification |
| :--- | :--- |
| Bus system |  |
| Transmission rate (bps) | RS-485 serial line <br> The transmission baudrate is automatically detected |
| Transmission mode | Even parity: 8 data bits, 1 stop bit <br> Odd parity: 8 data bits, 1 stop bit <br> No parity: 8 data bits, 2 stop bits |
| The transmission mode is automatically detected |  |

■ Default baudrate: 19'200 BPS, 8 data bits, 1 stop bit, even parity

- The communication is ready 10 s after the power on

■ For a description of the used registers please look at the register page

## Data transmission

■ Only «Read Holding Registers [03]/ Write Multiple Registers [16]» instructions are recognized.

- Up to 20 registers can be read and two registers can be written at a time.
- The device supports broadcast messages.

■ In accordance with the modbus protocol, a register $R$ is numbered as $R-1$ when transmitted.

- The device has a voltage monitoring system. In case of voltage loss, registers are stored in EEPROM (transmission rate, etc.)

## Exception Responses

- ILLEGAL FUNCTION [01]: The function code is not implemented.
- ILLEGAL DATA ADDRESS [02]: The address of some requested registers is out of range or more than 20 registers have been requested.
■ ILLEGAL DATA VALUE [03]: The value in the data field is invalid for the referenced register.

## Registers

For double registers ( $4-5,16-17,28-29,30-31,32-33,34-35$ ) the high register is sent first (big_Endian).
Counters ( $28-29,30-31,32-33,34-35$ ) can be reset by writing 0 in both registers.

| R | Read | Write | Description | Unit or Value |
| :---: | :---: | :---: | :---: | :---: |
| 01 | X |  | Firmware Version | Ex: «10»=FW 1.0 |
| 02 | X |  | Number of supported registers | will give «43» |
| 03 | X |  | Number of supported flags | will give «0» |
| 04-05 | X |  | Baudrate [BPS] | $\begin{aligned} & \text { Ex: Baudrate High }=1 \text {; Baudrate Low }=49^{\prime} 664 \\ & 1 \times 655^{\prime} 536+49^{\prime} 664=115 ' 200 \text { bps } \end{aligned}$ |
| 06 |  |  | Not used | will give a «0» |
| 07 | X |  | Type/ASN Funktion | will give «EE» |
| 08 | X |  | Type/ASN Funktion | will give «M-» |
| 09 | X |  | Type/ASN Funktion | will give «CO» |
| 10 | X |  | Type/ASN Funktion | will give «NV》 |
| 11 | X |  | Type/ASN Funktion | will give «ER» |
| 12 |  |  | Not used | will give a «0» |
| 13 |  |  | Not used | will give a «0» |
| 14 |  |  | Not used | will give a «0» |
| 15 | X |  | HW Version | Ex: «10» = HW 1.0 |
| 16-17 | X |  | Serial Number | Unique 32 bits serial number |
| 18 |  |  | Not used | will give a «0» |
| 19 |  |  | Not used | will give a «0» |
| 20 |  |  | Not used | will give a «0» |
| 21 |  |  | Not used | will give a «0» |
| 22 | X |  | Status/Protect | «0» = no Problem \| «1> = Problem with last communication request |
| 23 | X |  | Timeout | will give «Timeout [ms]» |
| 24 | X |  | Modbus Address | 1-99 |
| 25 |  |  | Not used | will give a «0» |
| 26 |  |  | Not used | will give a «0» |
| 27 |  |  | Not used | will give a «0» |
| 28-29 | X | X | Counter S01 | Ex: Counter S01 High = 13. Counter S01 Low = 60'383; $13 \times 65^{\prime} 536+$ 60'383 = 912'351 \| Counter S01: 912'351/2000 = 456.2 kWh |
| 30-31 | X | X | Counter 502 | Ex: Counter S02 High = 13. Counter S02 Low = 60'383; $13 \times 65^{\prime} 536+$ 60'383 = 912'351 \| Counter S02: 912'351/2000 = 456.2 kWh |
| 32-33 | X | X | Counter S03 | Ex: Counter S03 High = 13. Counter S03 Low = 60'383; $13 \times 65^{\prime} 536+$ 60'383 = 912'351 \| Counter S03: 912'351/2000 = 456.2 kWh |
| 34-35 | X | X | Counter S04 | Ex: Counter S04 High = 13. Counter S04 Low = 60'383; $13 \times 65^{\prime} 536+$ 60'383 = 912'351 \| Counter S04: 912'351/2000 $=456.2 \mathrm{kWh}$ |
| 36 | X | X | Impulses per unit for S01 | Ex: $2000=2000 \mathrm{lmp} / \mathrm{kWh}$ |
| 37 | X | X | Impulses per unit for SO 2 | Ex: $2000=2000 \mathrm{lmp} / \mathrm{kWh}$ |
| 38 | X | X | Impulses per unit for 503 | Ex: $2000=2000 \mathrm{lmp} / \mathrm{kWh}$ |
| 39 | X | X | Impulses per unit for $\mathrm{SO4}$ | Ex: $2000=2000 \mathrm{lmp} / \mathrm{kWh}$ |
| 40 | X | X | ID for S01 | User defined identification number |
| 41 | X | X | ID for S02 | User defined identification number |
| 42 | X | X | ID for S03 | User defined identification number |
| 43 | X | X | ID for 504 | User defined identification number |
